

NTT DATA

NTT DATA welcomed Dell Services into the family in 2016. Together, we offer one of the industry's most comprehensive services portfolios designed to modernize business and technology to deliver the outcomes that matter most to our clients.

Integrate Clinical, Financial and External Data for Better Patient Care and Success With Outcomes-Based Contracts

Healthcare Integration Solutions by NTT DATA

NTT DATA Services
formerly Dell Services

Healthcare is moving swiftly toward adoption of accountable care organizations (ACOs) and other risk-based contract models. To succeed in this new environment, your organization needs a complete view of each patient and the ability to integrate data for population health management, financial risk management and predictive analytics. But that level of data integration can be difficult to achieve, and the capital investment needed to implement an integration platform can be daunting.

Healthcare Integration Solutions by NTT DATA offer comprehensive support, with no capital investment or purchase of hardware or software needed. With our integration expertise, we can ease the transition to a highly connected environment. We provide services for designing, planning, implementing and supporting your integration projects. With our services, you can enable disparate IT systems and software applications to communicate and exchange data and quickly realize real value from your integration efforts.

There are three options for accessing our industry-leading integration solutions:

- **Turnkey:** Our team of data scientists, clinicians, integration experts and project managers can design, plan and implement your integration project, leaving you and your staff free for other important work.
- **Collaborative:** NTT DATA experts can work side by side with your team. We provide consultation and augment staff and skills where needed, allowing your team to grow their integration skills, while ensuring they have the expertise and resources to quickly complete the project. You decide what services you need, and we design a custom offering to meet your requirements.
- **Self-service:** NTT DATA provides an integration platform as a service available in a monthly subscription, allowing you to use our industry-leading tools to speed up your integration projects. Our team can also provide guidance and support to optimize your use of these tools.

Key benefits:

- Reduce time to value and avoid capital investment
- Share data across the care continuum — quickly and cost effectively
- Improve patient outcomes with unified, patient-centric records
- Get the analytic insights to succeed with accountable care and risk-based contracting
- Improve system performance, eliminate redundancies and reduce disruptions to patient care
- Lower IT support costs with speedy, cost-efficient system interfaces

Connect all your applications and data anywhere, anytime

NTT DATA has the tools to help you seamlessly integrate cloud solutions with your existing infrastructure and applications.

Our experts can help you configure and integrate complex web services technology. And use master data management to model, match, synchronize and cleanse your data across domains.

Connect with ACO partners, payers and broaden your population health data

ACOs and other value-based reimbursement models require a high degree of data sharing and care coordination. These models also need a broad data set for effective population health analytics. With our Healthcare Integration Solutions, you can collaborate easily and add a broad range of external data sources to your population health analytics. Pull data from patient records housed with other providers, patient claims history, social media, census and other relevant external sources.

Health information exchange

We help providers and health plans exchange information, such as lab, x-ray and MRI results, as well as payment and billing information. Our team of experts can help you extract data from various systems and match patient records with payer records to produce a custom patient portfolio of all patient events in any system. This provides a patient-centric view of all treatments and helps clinicians find ways to improve patient outcomes.

It includes:

- A single view of patient information via a centralized clinician portal
- A workflow-friendly interface
- A robust patient consent and document management solution
- Image archive integration
- A one vendor, end-to-end solution
- A cloud-option with multi-tenant architecture

Why NTT DATA?

As a top 10 global business and IT services provider, NTT DATA offers the comprehensive services and in-depth healthcare expertise needed for fast, effective data integration. In fact:

- NTT DATA works with 50% of U.S. hospitals and serves more than 43,000 clinicians and over 1,000 physician practices.
- We have more than 25 years of experience delivering services to physician practices, medical centers, large healthcare systems and allied healthcare organizations.
- Our Healthcare Integration Solutions team includes data scientists, integration experts and clinical and business experts who understand the unique requirements of healthcare compliance and security.
