

NTT DATA TRAINING

FACT SHEET

NTT DATA delivers full-spectrum training capabilities, strategically positioning federal organizations to successfully meet constantly evolving priorities.

OVERVIEW

Excellent training is a key element of a highly qualified workforce and a catalyst for superior performance. Mission and training requirements constantly evolve and many organizations are looking for the best way to continually identify, create, refine, and deliver effective training.

CURRICULUM DESIGN AND DEVELOPMENT

Capitalizing on job-task analysis expertise, we align work with operational objectives using instructional systems design (ISD) models like Analysis, Design, Development, Implementation, and Evaluation (ADDIE) to create learning experiences that significantly enhance work performance.

INSTRUCTION AND DELIVERY

Our instructors and trainers work across all delivery mediums, including computer, mobile, and web-based training, Instructor Led Training (ILT), and blended learning environments to deliver innovative classes that positively impact operational performance.

TECHNOLOGY

We provide full-range creative IT solutions for learning and education that capitalize on efficient and flexible technologies, such as: eLearning, mobile, agile, cloud, .edu environments, and leading Learning Management Systems (LMS). Solutions can include everything from design to implementation to management.

NTT DATA FEDERAL TRAINING EXPERIENCE

- » 15 years of extensive experience developing and delivering training for Law Enforcement, Homeland Security, Intelligence Community, and DoD organizations
- » Successfully delivered instruction based training to over 40,000 students
- » Created and delivered 46 eLearning programs for a large Law Enforcement Agency
- » Developed specialized training for advanced technologies related to Law Enforcement Special Agents, Intel Analysts, and Investigator job series
- » Provided courses with a global focus, including virtual and self-paced learning, as well as language translation support

TRAINING EXPERIENCE

FACT SHEET

NTT DATA currently supports major educational initiatives for Federal Law Enforcement, Criminal Justice, Homeland Security, and Defense agencies.

FEDERAL LAW ENFORCEMENT AGENCY

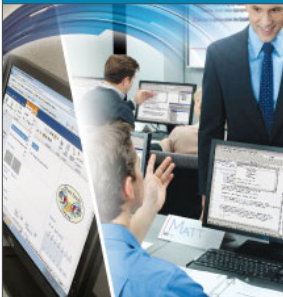

In partnership with federal law enforcement agencies, NTT DATA successfully provides instructional subject matter expertise in advanced technologies, database development and maintenance, audio visual/graphics, and network and computer infrastructure support. Our instructors, in conjunction with the subject matter experts, identify instructional needs, and develop instructor-led and eLearning courses. We facilitate these courses around the globe, focusing on essential training in computer, security, and advanced GOTS, COTS, and proprietary applications. Since 1999 our team's instruction has reached more than 35 thousand federal (Special Agents, Diversion Investigators, Intelligence Analysis), state, local, and international students.

LAW ENFORCEMENT AND CRIMINAL JUSTICE

We support training efforts for initiatives including a virtual case file system, a DNA information system, and Public Key Infrastructure (PKI). Recently, NTT DATA has supported a curriculum validation initiative where we have successfully conducted Job Task Analysis (JTA) for the core Special Agent (SA) workforce, the largest and most complex component of operational divisions. This effort enabled us to support the alignment of training with career path progression and mission objectives, including curriculum development for integrated Agent and Intelligence Analyst training.

HOMELAND SECURITY

NTT DATA is supporting a homeland security organization in its transition to a 100% agile software development environment. As one element of an overall change management effort we developed a comprehensive training program and have successfully trained over 1000 federal staff in agile software development processes and practices. Course offerings include "Introduction to Agile and Scrum", "Agile Product Owner Training", "Agile User Story Workshop", and "Kanban", "Software Design", "Automated Unit Testing", and others. We support a distributed federal staff nationwide using a blended learning approach that encompasses on-site instructor-led training, video conferencing course work, on-demand computer based training, and live interactive webinars.

DOD.edu

Our team architected, designed, deployed, tested, and runs the IT infrastructure for a large industrial defense contractor, which employs 90 full and part time instructors and administrators operating in a newly renovated 90,000 square foot education facility. Using mobile endpoints and Microsoft Office for Education, students and faculty enjoy high-bandwidth, wireless access to email, calendar, file sharing, and collaboration capabilities. The facility is divided into public and restricted access areas, and infrastructure is protected from unauthorized access via on-premise firewalls, proxy servers, and intrusion detection/protection devices.
